

**AGING PERSPECTIVES: WALK IN
THEIR SHOES** . A ROLE-PLAY SIM FOR BUILDING EMPATHY.

WALK IN THEIR SHOES

JASON BOURSIER
EDCI 672
PURDUE UNIVERSITY

Objective: Students will demonstrate understanding by interacting with scenarios where they must respond empathetically to challenges faced by aging individuals.

Simulation Tie-In: Students will face simulated daily challenges experienced by older adults and will need to make decisions on how to effectively respond!

Instructions for Oldness:

THE DIFFICULT CROSSWALK

SHOT #1

SCENE SETTING: A crosswalk near the bus stop. The light turns green, and the elderly Hispanic woman needs to cross the street to reach the bus stop in time.

CAMERA SHOT: The character's movement is slow, reflecting mobility challenges. The countdown timer for the crosswalk ticks down quickly, adding stress.

SPECIAL FX: A heartbeat sound effect that grows louder as the timer counts down, to convey the character's anxiety.

SHOT #2

GRAPHICS: Cars waiting at the intersection and pedestrians moving quickly around the elderly character.

PERSPECTIVE: The screen shows a first-person view of the crosswalk from the elderly person's perspective. The light changes and has to navigate the street.

USER ACTION: Click "Ask for Help" to simulate interacting with someone nearby.

SHOT #3

TEXT ELEMENTS: "You need to cross the street, but you're not as fast as you used to be. The light is already counting down. What will you do?"

INTERACTIVE ELEMENTS: The student can click to make the character move forward, but the movement is intentionally slow to simulate limited mobility.

Learning Objectives:

Students will demonstrate awareness of the physical and emotional challenges faced by elderly individuals crossing busy streets, including mobility limitations, vision impairments, distractions, and accessibility issues.

Students will evaluate the role of external factors, such as pedestrian signals, street design, and other people's behaviors, in contributing to the character's experience of crossing the road.

Empathy-Inducing Blurb from Research: According to Decety and Jackson (2006), perspective-taking—imagining oneself in someone else's situation—can significantly increase empathy. In this scenario, the elderly Hispanic female may face challenges such as poorly timed crosswalk signals, difficulty seeing oncoming traffic, or drivers failing to yield, highlighting how navigating public infrastructure can be especially challenging for elderly individuals. Experiencing these challenges firsthand helps learners understand how external factors influence safety and confidence for elderly pedestrians.

Decety, J., & Jackson, P. L. (2006). A social-neuroscience perspective on empathy. *Current*

Scenario Flow:

Initial View: The student sees the crosswalk and the timer counting down. The camera focuses on the crosswalk light turning green.

Mobility Challenge: The character moves slowly, and the timer quickly counts down, creating a sense of urgency.

User Actions: The student has the option to:

Click repeatedly to move the character across the street.

Press the “Request Assistance” button to get help crossing.

Feedback:

If the student clicks to move, the character advances slowly, and a prompt appears: “The timer is running out. Maybe asking for help would be a good idea?”

If they press “Request Assistance,” a passerby helps the character cross safely.

THE DIFFICULT BUS STOP

SHOT #4

There are several signs showing different bus routes to CAUCASION FEMALE.

VISUAL DETAIL: Multiple bus signs with tiny text, positioned slightly far from the camera to make clear that it's challenging to read.

SOUNDS: A muffled loudspeaker voice announcing bus arrivals, mixed with street noise to illustrate hearing difficulties.

ACTION: The option for the student to click a button to "repeat announcement," but still hear it with reduced clarity.

SHOT #5

ACTION: The student can click on the blurry bus schedule to try to zoom in and read it.

ACTION: A "Help" button is available, which provides a pop-up with clearer information about the bus routes.

DIALOGUE: If the student clicks on the blurry text, they receive a prompt: "The text is still hard to read. Maybe asking for help would be a good idea?"

SHOT #6

ACTION: Navigation arrows let the student look around the bus stop area.

DIALOGUE: "You're trying to figure out which bus to take, but the signs are tough to read, and you're not sure if you heard the announcement correctly. What do you do?"

ACTION: If they press "Ask for Help," a character appears on screen, offering guidance on which bus to take.

Learning Objectives:

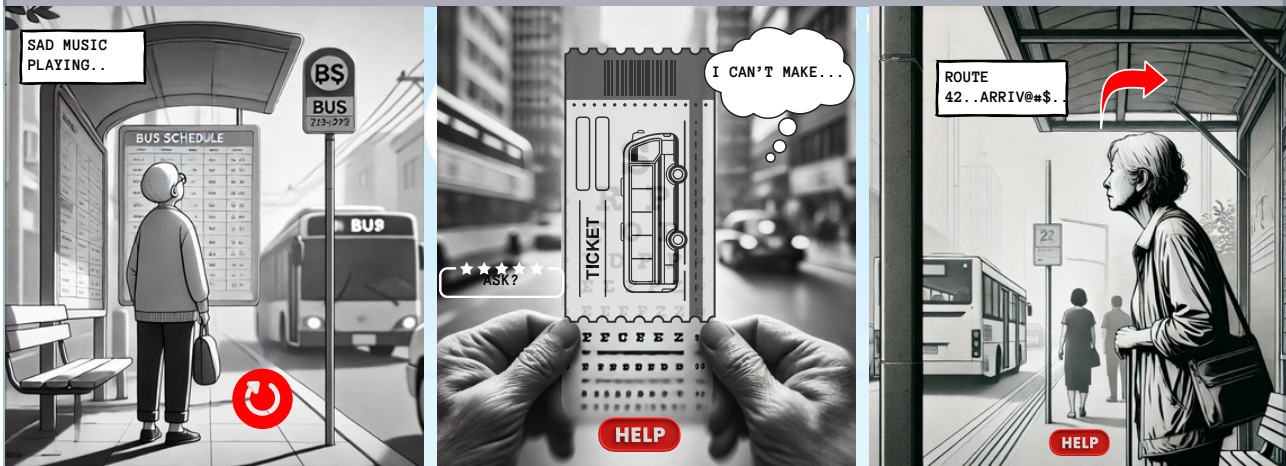

Students will identify and describe the challenges faced by elderly individuals waiting for public transportation, focusing on issues of mobility, safety, accessibility, and social isolation.

Students will analyze and reflect on the emotions experienced by the character, fostering an understanding of how physical limitations and fear of public spaces can impact an elderly individual's behavior.

Empathy-Inducing Blurb from Research: Research suggests that experiencing or observing realistic social challenges can help individuals develop empathy (Hojat, 2009). Waiting in public spaces, such as a bus stop, can create feelings of vulnerability, especially for elderly individuals who may have mobility issues or fear falling. By role-playing this scene, students can better understand the physical and emotional discomfort that comes with navigating public spaces independently as an elderly person.

Hojat, M. (2009). Ten approaches for enhancing empathy in health and human services cultures. *Journal of Health and Human Services Administration*, 31(4), 412-450.

DIFFICULT BUS STOP DETAIL

SHOT #4

SPECIAL FX: Blurring Effect on the bus schedule text.

MUSIC: A soft and melancholic background music to convey the feelings of confusion.

VISUAL DETAIL: The camera starts with a wide shot, then zooms to focus on the small text on the bus schedule.

SHOT #5

VISUAL DETAIL: The screen will have blurred edges, representing impaired vision.

DIALOGUE: "I can't make out the numbers. Maybe I should ask someone for assistance."

FEEDBACK: If the student clicks on the blurry text, they receive a prompt: "The text is still hard to read. Maybe asking for help would be a good idea?"

SHOT #6

SOUND FX: Muffled "Route 42... arriving... minutes." (intentionally unclear)

VISUAL DETAIL: The bus stop is busy, the background figures are muted and out of focus.

ACTION BUTTON: When the "Help" button is clicked, a passerby appears in focus, with a friendly smile.

Key Actions & Events: The elderly person stands at the bus stop, squinting at a bus schedule with small, blurry print.

Audio-Visual Elements: Background noises include chatter, traffic, and muffled bus announcements.

Dialogue: None, but include text prompt: "Which bus am I supposed to take?"

Sound Effects: Indistinct chatter, traffic noise, muffled announcement.

Visuals: Blurred bus schedules and distant outlines of the busy city.

Technical Details:

Camera Shot: First-person, blurred view from the elderly character.

Camera Movement: Subtle swaying to indicate character's effort in focusing.

Special Effects: Blurring effect to simulate visual impairments.

Notes: Emphasize the sense of vulnerability and sensory overload.

THE DIFFICULT BUS RIDE

SHOT #7

TEXT ELEMENTS: "You're trying to get on the bus, but are having trouble getting up the stairs. What do you do?"

CAMERA SHOT: Third person shot as they struggle and go slow while other people get on and off fast.

USER ACTION: Click "Ask for Help" to simulate interacting with someone nearby

SHOT #8

TEXT ELEMENTS: "You think your stop is coming up but you didn't hear the speaker, and can't see outside very well. What do you do?"

DIALOGUE: A bus announcement is heard, but it's muffled and difficult to understand.

SPECIAL FX: Muffling Effect on the loudspeaker sound to simulate hearing loss. Heart beats louder.

DIALOGUE: "I still can't hear the announcements..."

SHOT #9

TEXT ELEMENTS: "You try to ask someone for help but they don't hear you very well, what do you do?"

SOUND FX: Muffled loudspeaker announcement saying, "Route 42... arriving... minutes." (intentionally unclear) Heart beats even louder

USER ACTION: Click "Ask for Help" to simulate interacting with someone nearby

Learning Objectives:

Students will recognize and explain the social dynamics present when elderly individuals use public transportation, such as mobility challenges, lack of seating, and potential biases.

Students will propose two strategies for improving inclusivity and comfort for elderly passengers, focusing on interactions between the character and other commuters.

Empathy-Inducing Blurb from Research: Studies indicate that elderly individuals often face challenges such as difficulty finding seating, being ignored by other passengers, or experiencing subtle forms of discrimination (Sue et al., 2007). In this scene, students will role-play as an elderly African American male on a crowded bus, dealing with behaviors that could include being overlooked for a seat or facing dismissive attitudes. Understanding these dynamics helps students connect emotionally to these experiences, fostering deeper empathy for elderly individuals who rely on public transportation.

Sue, D. W., Capodilupo, C. M., Torino, G. C., Bucceri, J. M., Holder, A. M., Nadal, K. L., & Esquilin, M. (2007). Racial microaggressions in everyday life: Implications for clinical practice.

THE DIFFICULT RIDE DETAIL

SHOT #10

TEXT ELEMENTS: the African American male has internal thoughts such as "Is this the right route?" to convey uncertainty or frustration.

SOUND FX: Soft rumbling of the bus engine, muffled conversations. Faster heart beat.

VISUALS: Blurred views through the bus window, with details of passing buildings hazy and hard to recognize.

SHOT #11

TEXT ELEMENTS: "I can't tell what stop is coming up and if it's mine or not. Maybe I should ask someone for assistance."

SPECIAL FX: Highlight confusion and sense of uncertainty. Blurred signs outside the window. Very fast heart beat louder than all other FX.

CAMERA SHOT: First-person, slightly shaky to suggest anxiety.

SHOT #12

USER ACTION: Click "Ask for Help" to simulate interacting with someone nearby.

CAMERA MOVEMENT: Subtle left-to-right panning as they look around.

DIALOGUE with Passerby: "Do you need some help with the bus schedule?"

USER ACTION: Click "YES" and end up at correct stop, click "No, I'm alright," and end up lost in bad part of town.

Key Actions & Events: The elderly person is sitting on the bus, looking out and around, unsure of where they are.

Audio-Visual Elements:

Dialogue: "Is this the right route?"

Sound Effects: Soft rumbling of the bus engine, muffled conversations.

Visuals: Blurred views through the bus window, with details of passing buildings hazy and hard to recognize.

Technical Details:

Camera Shot: First-person, slightly shaky to suggest anxiety.

Camera Movement: Subtle left-to-right panning as they look around.

Special Effects: Blurred signs outside the window.

Notes: Highlight confusion and sense of uncertainty.

BONUS: THE VR/AR ASSISTED ELDERLY

SHOT #13 HYPOTHETICAL

TEXT ELEMENTS: You were a bit confused, but your grandkid got you some AR glasses to use to hear, see and translate, do you put them on?

KEY ACTIONS and EVENTS: The elderly person uses discreet AR glasses to view bus schedules and talk to the bus driver with translation.

USER ACTION: Click "Turn Around" to simulate interacting with someone nearby.

SHOT #14 HYPOTHETICAL

SPECIAL FX: Clear overlay to show AR translation.

VISUALS: Digital overlay showing translated text and schedule info.

SOUND FX: Bus engine, translated audio playing softly.

SHOT #15 HYPOTHETICAL

DIALOGUE: Driver (translated text overlay): "The next stop is Main Street."

INTERACTIVE ELEMENTS: The student can click the arrow to see how the elderly vision is enhanced

USER ACTION: Click "Help" to simulate announcing if others need help

Learning Objectives:

Students will simulate and experience the physical challenges faced by elderly individuals through VR technology, focusing on mobility issues, visual impairments, and difficulties with daily activities.

Students will analyze and propose strategies for addressing the challenges they experienced in the VR simulation, fostering an understanding of how assistive technologies can improve the quality of life for elderly individuals.

Empathy-Inducing Blurb from Research:

Research by Bachen et al. (2012) shows that immersive simulations, such as VR, can significantly enhance empathy by allowing participants to experience challenges firsthand. In this scenario, the Caucasian male character uses VR glasses to simulate the physical limitations of elderly individuals—such as reduced vision, slower reflexes, and mobility challenges. This immersive experience helps students understand the real-life struggles of the elderly, promoting empathy and encouraging them to think of innovative solutions to improve elderly care and accessibility.

Bachen, C. M., Hernandez-Ramos, P. F., & Raphael, C. (2012). Simulating real lives: Promoting global empathy and interest in learning through simulation games. *Simulation & Gaming*, 43(4), 437-460. <https://doi.org/10.1177/1046878111432108>

BONUS: THE VR/AR ASSISTED ELDERLY 2

SHOT #16 HYPOTHETICAL

KEY ACTIONS: The elderly person uses discreet AR glasses to view crosswalk

DIALOGUE: "Look at all these helpful alerts!"

USER ACTION: Click "Turn" to view the world differently

SHOT #17 HYPOTHETICAL

SOUND FX: Car noises, people noises, clearer

VISUALS: Digital overlay showing translated text and schedule info.

SPECIAL FX: Split screen to show vision without assistance on left and with AR assistance on right

USER ACTION: Click "Ask for Help" to simulate interacting with someone nearby.

SHOT #18 HYPOTHETICAL

INTERACTIVE ELEMENTS: The student can click the arrow to see how the elderly vision is enhanced
Visuals: Left side of screen blurry, right side has AR assisted tech!

Key Actions & Events: The elderly person uses discreet AR glasses to view bus schedules and talk to the bus driver with translation.

Audio-Visual Elements:

Dialogue: Driver (translated text overlay): "The next stop is Main Street."

Sound Effects: Bus engine, translated audio playing softly.

Visuals: Digital overlay showing translated text and schedule info.

Technical Details:

Camera Shot: First-person.

Camera Movement: Slight tracking motion towards the bus driver.

Special Effects: Clear overlay to show AR translation.

Notes: Highlight the benefits of AR glasses in providing clarity and accessibility.

THANK YOU FOR PLAYING!

WALK IN THEIR SHOES

JASON BOURSIER

PURDUE UNIVERSITY

CHARACTER
CHOICE PAGE

MARGARET, A 75-YEAR-OLD RETIREE SHE HAS ALWAYS PRIDED HERSELF ON HER INDEPENDENCE. MARGARET'S SLIGHT HESITATION ISN'T A SIGN OF WEAKNESS—IT'S A REFLECTION OF HER AWARENESS AND WISDOM, EARNED OVER DECADES OF NAVIGATING THE CHANGING URBAN LANDSCAPE.

ROSA, 78 SHE SPENT HER YOUTH RAISING HER FAMILY AND WORKING TIRELESSLY IN A BUSTLING COMMUNITY. CROSSING A BUSY STREET IS A REMINDER THAT WHILE HER PACE MAY HAVE SLOWED, HER DETERMINATION AND TENACITY REMAIN UNCHANGED.

JAMES, AN 80-YEAR-OLD FORMER TEACHER, HE ENJOYS THESE RIDES—THEY GIVE HIM THE CHANCE TO REFLECT SHARE STORIES WITH PASSENGERS. JAMES'S RELAXED DEEMANOR AND SUBTLE ENGAGEMENT WITH OTHERS SHOW HIS ENDURING CONNECTION TO THE WORLD AROUND HIM, ROOTED IN A LIFETIME OF GIVING AND LEARNING.

[BACK TO
START](#)

THE SIMULATION I DESIGNED IS ENTITLED AGING PERSPECTIVES: WALK IN THEIR SHOES AND ADDRESSES ALL STAKEHOLDERS WHILE WITHIN THE TIME AND BUDGET CONSTRAINTS FOR SEVERAL REASONS. THE AUDIENCE WILL BENEFIT FROM AN IMMERSIVE, ENGAGING GAME THAT COMPLEMENTS THE CURRICULUM BEYOND TRADITIONAL READING AND INTERVIEWS WITH ELDERLY INDIVIDUALS. THE FIRST-PERSON ROLE-PLAY, ENHANCED BY ELEMENTS LIKE BLURRED VISION, INCREASED HEART RATES, AND OPTIONS TO REQUEST ASSISTANCE, OFFERS AN EMPATHETIC EXPERIENCE THAT ALIGNS WITH LORENA'S GOAL OF FOSTERING UNDERSTANDING FOR THE ELDERLY. IT ALSO RESPECTS SUZIE'S DESIGN TOOL LIMITATIONS, AS DETAILED FACIAL EXPRESSIONS AREN'T ESSENTIAL FOR COMMUNICATING THE CORE LEARNING OBJECTIVES, MEETING ADAM'S PREFERENCE FOR A STRUCTURED, SCAFFOLDED LEARNING EXPERIENCE.

TO MANAGE DEVELOPMENT WITHIN TIME AND BUDGET CONSTRAINTS, I PROPOSE SIMPLE BLACK-AND-WHITE GRAPHICS, SIMILAR TO A SKETCH ARTIST'S STYLE, WITH RED SIGNALING BUTTONS TO GUIDE PLAYERS. THE GAME IS DESIGNED WITHIN A SINGLE 3D ENVIRONMENT THAT ACCOMMODATES FOUR SCENARIOS, KEEPING DEVELOPMENT TIME MANAGEABLE. THE INCLUSION OF THREE DIVERSE CHARACTERS, WITH KNOWLEDGE BLURBS AND REFERENCES AFTER EACH SCENARIO, SHOULD SATISFY SMES LIKE JOHANNA AND LORENA. EACH STORYLINE EMPHASIZES EVERYDAY CHALLENGES FACED BY THE ELDERLY, ENSURING EMOTIONAL RESONANCE AND ALIGNMENT WITH THE PROJECT'S CORE OBJECTIVE.

SEVERAL MULTIMEDIA PRINCIPLES GUIDED MY DESIGN CHOICES. THE PERSONALIZATION PRINCIPLE IS APPLIED THROUGH CONVERSATIONAL, FIRST- AND SECOND-PERSON LANGUAGE, WITH POLITE SPEECH AND CONTRACTIONS. PRE-TRAINING IS INTRODUCED ON THE TITLE SCREEN, WHERE STUDENTS MUST SELECT THE "INSTRUCTIONS FOR OLDNESS" BUTTON BEFORE BEGINNING GAMEPLAY. THE SEGMENTING PRINCIPLE IS ALSO INCORPORATED, AS THE GAME IS SELF-PACED. PLAYERS START BY CHOOSING A CHARACTER FROM A DESCRIPTION ON THE CHARACTER INTRODUCTION SCREEN, INITIATING GAMEPLAY WITH A THIRD-PERSON DRONE VIEW THAT TRANSITIONS TO A FIRST-PERSON PERSPECTIVE. THIS STRUCTURE PROMOTES ACCESSIBILITY AND ENGAGEMENT, OFFERING AN INTUITIVE AND IMPACTFUL LEARNING EXPERIENCE.

The simulation I designed is entitled Aging Perspectives: Walk in Their Shoes and addresses all stakeholders while within the time and budget constraints for several reasons. The audience will benefit from an immersive, engaging game that complements the curriculum beyond traditional reading and interviews with elderly individuals. The first-person role-play, enhanced by elements like blurred vision, increased heart rates, and options to request assistance, offers an empathetic experience that aligns with Lorena's goal of fostering understanding for the elderly. It also respects Suzie's design tool limitations, as detailed facial expressions aren't essential for communicating the core learning objectives, meeting Adam's preference for a structured, scaffolded learning experience.

To manage development within time and budget constraints, I propose simple black-and-white graphics, similar to a sketch artist's style, with red signaling buttons to guide players. The game is designed within a single 3D environment that accommodates four scenarios, keeping development time manageable. The inclusion of three diverse characters, with knowledge blurbs and references after each scenario, should satisfy SMEs like Johanna and Lorena. Each storyline emphasizes everyday challenges faced by the elderly, ensuring emotional resonance and alignment with the project's core objective.

Several multimedia principles guided my design choices. The personalization principle is applied through conversational, first- and second-person language, with polite speech and contractions. Pre-training is introduced on the title screen, where students must select the "instructions for oldness" button before beginning gameplay. The segmenting principle is also incorporated, as the game is self-paced. Players start by choosing a character from a description on the character introduction screen, initiating gameplay with a third-person drone view that transitions to a first-person perspective. This structure promotes accessibility and engagement, offering an intuitive and impactful learning experience.
